WHO WE ARE

We are a young and ambitious team that has been operating for years in many industrial automation sectors. We have worked successfully both in Italy and abroad, seeking customer satisfaction through efficiency, punctuality, and flexibility.

Best practices such as the use of lower-level languages like SCL/ST, enable us to program much faster than the main market players that employ conventional technologies.

WHAT WE DO

MACHINE RETROFITTING

We will bring your machines to state of the art level of performance through the application of industrial best practices.

HMI

We place the operator at the center of our projects with user-friendly interfaces.

REMOTE SUPPORT

We offer enduring remote support on our machines. Remote support brings many advantages over traditional, on-site assistance.

MOTION CONTROL

Over the years we designed and built a variety of hydraulic and electrical open loop and closed loop controls for different industries.

CONTROL PANELS

We understand that efficient design of electrical layouts is vital for the life cycle of the line.

ENERGY MONITORING

An energy monitoring software solution means saving money and a reduced environmental impact.

TRAINING

Whether at our premises, online, or at your facility we will make sure to transfer operational expertise to you and your employees.

COMPUTER VISION

Reduce machine downtime and production waste by improving quality control with our all-in-one computer vision solutions.

INDUSTRY 4.0

All our applications are compliant with relevant industry 4.0 standards and follow related best practices.

AUTOMATED REPORTS

Create neat production reports to keep track of manufacturing, whether on the field or on at the office.

CLOUD DASHBOARD

Monitor your production from anywhere in the world, stay in contact with your consultants at a fraction of the price.

INNOVATION

Our team features a member of the Italian register of Innovation Managers, we will help you kickstart your business' digital transformation.
